FLAGIT – Service Profile & Proposal

1. Introduction

FLAGIT is a simple, mobile-first safety management platform designed for site teams to log, track, and report safety observations in real time.

It replaces fragmented workflows such as WhatsApp messages, Excel sheets, and manual reporting with a single, structured system.

---

2. What FLAGIT Solves

Most site teams currently face:

- Delayed safety reporting
- Poor visibility of open issues
- Difficulty tracking closeouts
- Time-consuming report preparation

FLAGIT addresses these by providing a centralized, real-time system.

---

3. Key Features

- **Real-Time Safety Observation Logging**
  Log issues directly from mobile devices on site
- **Status Tracking**
  Track observations as Open, In Progress, or Closed
- **Dashboard Overview**
  View total observations, open issues, and category breakdown
- **Team Management**
  Admin users can invite and manage team members
- **Instant PDF Report Generation**
  Download complete safety reports instantl

---

4. How It Works

1. A project is created and assigned an admin user
2. The admin invites team members via email

3. Team members log and update safety observations
4. Management views progress through the dashboard
5. Reports can be generated instantly at any time

---

5. Security & Data Handling

- Data is stored securely in a managed cloud database (Supabase)
- Application is hosted on a secure global platform (Vercel)
- Access is restricted to invited users only
- Each company's data is isolated per project
- All communication is secured via HTTPS

---

6. Deployment & Onboarding

- Initial setup takes less than 10 minutes
- No installation required (web-based access)
- Admin users can onboard their teams independently

---

7. Proposed Pilot Engagement

We propose starting with a **pilot project** to demonstrate value:

- Duration: One project cycle
- Scope: Full use of FLAGIT for safety observation tracking
- Support: Setup and onboarding assistance provided

---

8. Commercial Proposal

Option A – Project-Based License (Short-Term Use)

Duration	Price (AED)	Ideal For
30 days	350	Events, inspections, short builds
3 months	900	Medium-term projects

Duration	Price (AED)	Ideal For
6 months	1,500	Long-term projects without subscription

Option B – Monthly Subscription

Tier	Price (AED)	Limit	Notes
Single Project	150/month	1 project	Entry tier
Multi-Project (up to 3)	**420/month**	Max 3 projects	*AED 30 savings vs buying 3 singles*
Unlimited Projects	600–700/month (optional)	Unlimited	For large contractors

---

9. Benefits to Your Organization

- Faster reporting turnaround
- Improved visibility of site safety status
- Better compliance documentation
- Reduced reliance on manual tracking methods
- Improved accountability across teams

---

10. Next Step

We would be pleased to schedule a short demo session (10–15 minutes) to walk through the system and answer any questions.
